

Assembly and Operating Instructions for Outback® Omega 200 and Omega 250 Gas Barbecues

OM200H

OM250H

Photographs are not to scale.
Specifications subject to change
without prior notice.

CE 2575 UK
CA 0359

WARNING

- For outdoor use only.
- Read instructions before using the appliance. Failure to follow instructions could result in death, serious bodily injury, and/or property loss.
- Warning: accessible parts may be very hot. Keep young children away.
- Do not move the appliance during use.
- Turn off the gas supply at the gas bottle after use.
- Any modification of the appliance, misuse, or failure to follow the instructions may be dangerous and will invalidate your warranty. This does not affect your statutory rights.
- Retain these instructions for future reference.
- Leak test annually, and whenever the gas bottle is removed or replaced. Check the hose connections are tight and leak test each time you reconnect the gas bottle.

FOR YOUR SAFETY

If you smell gas:

1. Shut off gas to the appliance.
2. Extinguish any open flame.
3. Open barbecue lid or hood.
4. If odour continues, discontinue use and contact your local dealer.

FOR YOUR SAFETY

1. Do not store or use petrol or other flammable vapours or liquids in the vicinity of this or any other appliance.
2. A gas bottle not connected for use shall not be stored in the vicinity of this or any other appliance.

Parts List

Quantities vary according to model purchased. Specifications subject to change without prior notice. For more details on hardware, please see the corresponding Hardware Reference Diagram for your barbecue model.

Assembly

IMPORTANT!

- **TOOLS NEEDED FOR ASSEMBLY:** Medium size flat blade or Phillips/Crosspoint screwdriver, adjustable spanner or metric spanner set.
- Remove any internal components or packaging from the barbecue body.
- Whilst every care is taken in the manufacture of this product, care must be taken during assembly in case sharp edges are present.
- **Please read the Important Information section carefully before assembly and use of your barbecue.**

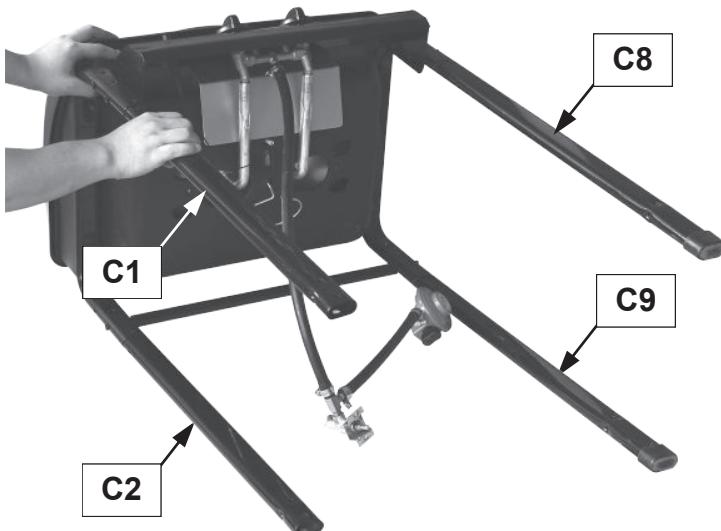

1

✓ Omega 200 ✓ Omega 250

2

✓ Omega 200 ✓ Omega 250

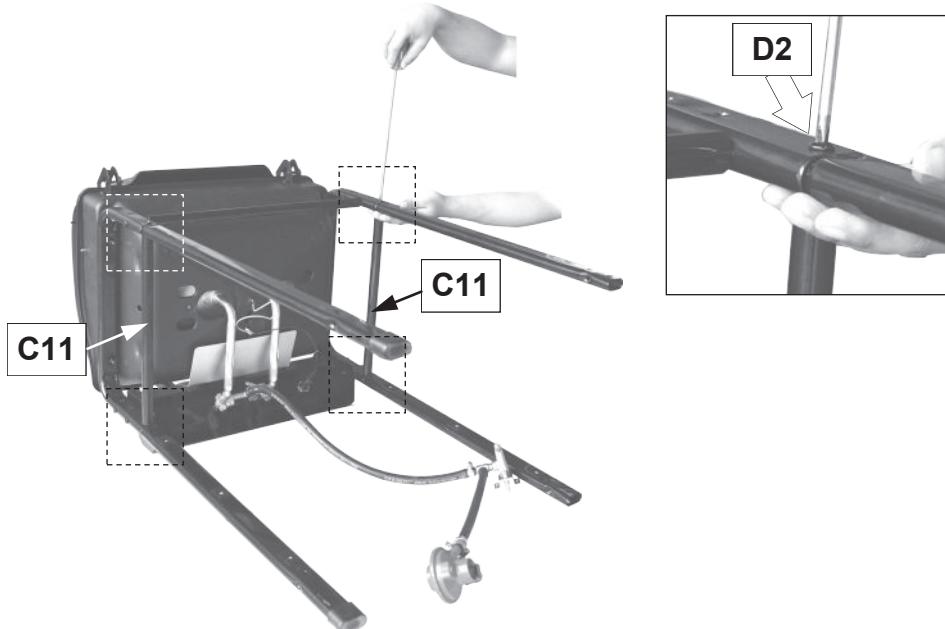

Warning: Care must be taken to ensure hood does not fall open unexpectedly.

NOTE: Ensure that the legs with the Velcro attached to them are at the front of the barbecue, with the Velcro facing inwards.

1. Maximum diameter or breadth is 315mm.
2. Maximum height (regulator included) is 580mm.

**ASSEMBLY IS NOW COMPLETE.
PROCEED TO THE NEXT PAGE FOR INSTRUCTIONS ON OPERATION AND
MAINTENANCE**

ALL JOINTS AND CONNECTIONS MUST NOW BE **LEAK TESTED** BEFORE USING THE
BARBECUE.

Leak test annually, and whenever the gas bottle is removed or replaced.

Leak Testing

Always perform a leak test in a well-ventilated area.

Step 1 - Confirm all control knobs are in the off position.

Step 2 - Turn the gas on / open the gas control valve on the gas bottle or regulator.

Step 3 - Check for leaks by brushing a solution of $\frac{1}{2}$ water and $\frac{1}{2}$ liquid detergent / soap over all the gas system joints, including gas bottle valve connections, hose connections, and regulator connections.

Step 4 - NEVER USE AN OPEN FLAME to test for leaks at any time.

Step 5 - If bubbles form over any of the joints there is a leak

- Turn off the gas supply at the gas bottle
- Retighten all joints
- Repeat test
- If bubbles form again do not use the barbecue and contact your local distributor for assistance.

Always wipe the mixed solution ($\frac{1}{2}$ water and $\frac{1}{2}$ liquid detergent / soap) from all joints and connections after leak testing.

Important Information

Please read these instructions carefully before assembly and use of your barbecue.

- ⚠ Retain these instructions for future reference.
- ⚠ This product is for outdoor use only. Do not use indoors.
- ⚠ Do not use the barbecue or store gas bottles below ground level. LP gas is heavier than air so if a leak occurs the gas will collect at a low level and could ignite in the presence of a flame or spark.
- ⚠ For use with LPG bottled gas only. A suitable regulator must be used for butane, propane or mixes.
- ⚠ Remove plastic wrap from any part before lighting.
- ⚠ Do not use within 1m of any flammable structure or surface. Do not use under any combustible surface.
- ⚠ LP gas bottles should never be placed directly underneath the barbecue.
- ⚠ LP gas bottles should never be stored or used laid on their side, in the horizontal position. A leak would be very serious and liquid could enter the gas line with serious result.
- ⚠ Never store gas bottles indoors.
- ⚠ Open the barbecue hood before lighting.
- ⚠ Once lit, do not move the barbecue until it has completely cooled, after use.
- ⚠ This barbecue must not be left unattended when lit.
- ⚠ The hood or lid handle can become very hot. Grip only the centre of the handle. Always use oven gloves when cooking or carrying out any adjustments to the barbecue.
- ⚠ Use purpose designed barbecue tools with long, heat resistant handles.
- ⚠ Use Caution when opening the hood or lid, as hot steam inside is released upon opening.
- ⚠ Parts of this barbecue become very hot – care must be taken, especially when children, elderly people, and animals are present.
- ⚠ Turn off the gas supply at the gas bottle after use.
- ⚠ Never cover a barbecue until it has completely cooled.
- ⚠ Use this barbecue only on a stable, flat surface.
- ⚠ Before you use your barbecue, perform a leak test. This is the only safe and sure way to detect any gas leaking from joints and

connections of the barbecue after assembly.

- ⚠ Leak test annually, and whenever the gas bottle is removed or replaced.
- ⚠ Do not store flammable materials near this barbecue.
- ⚠ Do not use aerosols near this barbecue.
- ⚠ Failure to follow the manual's instructions could result in serious injury or damage.
- ⚠ Parts sealed by the manufacturer or its agent must not be altered by the user.
- ⚠ Modification of the barbecue may be dangerous, is not permitted and will nullify any warranty.
- ⚠ If you have any queries regarding these instructions, contact your local dealer.

Gas, Regulator and Hose

This barbecue includes a regulator which is suitable for use with Propane Patio Gas bottles. For optimal performance, we suggest to use a 13kg size gas bottle. Propane bottles will supply gas all year round, even on cold winter days. A spanner may be required to change gas bottles.

- The regulator should be replaced every 5 years when stored indoors or every 3 years when stored outdoors. If the regulator malfunctions, do not use the appliance until the regulator is replaced.
- The hose between the regulator and the appliance should be replaced every 2 years, even if it does not show any external wear.
- The hose should hang freely with no bends, twisting, tension, folds, or kinks that could obstruct free flow of gas. Always inspect the hose for cuts, cracks, or excessive wear before use.
- Apart from the connection point, no part of the hose should touch any hot barbecue parts. If the hose shows any sign of damage it must be replaced with a hose suitable for use with LP gas which meets the national standards for the country of use.
- A suitable hose must comply with EN16436-1 or local regulation, and the length should not exceed 1.5 metres.

The regulator included with this barbecue complies with EN16129. YOU MUST HAVE THE PROPER REGULATOR AND GAS BOTTLE IN ORDER FOR THE BARBECUE TO OPERATE SAFELY AND EFFICIENTLY. USE OF AN INCORRECT OR FAULTY REGULATOR OR GAS BOTTLE IS DANGEROUS AND WILL INVALIDATE ANY WARRANTY. In the case of replacing your original hose and regulator, please consult your

local gas dealer for the most suitable regulators and gas bottles.

Installation

Selecting a Location

This barbecue is for **outdoor use only** and should be placed in a well-ventilated area, and on a safe and even surface. Never place your barbecue below ground level. Take care to ensure that it is not placed **UNDER** any combustible surface. The sides of the barbecue should NEVER be closer than 1 metre from any combustible surface, including trees and fences and make sure that there are no heat sources near the barbecue (cigarettes, open flames, spark etc.). Keep this barbecue away from any flammable materials!

Precautions

Do not obstruct any ventilation openings in the barbecue body.

Position the gas bottle on level ground next to the barbecue and safely away from any source of heat.

Should you need to install or change the gas bottle, confirm that the barbecue is switched off, and that there are no sources of ignition (cigarettes, open flame, sparks, etc.) near before proceeding.

Connecting a Gas Hose to the Barbecue

Connect the gas hose to the gas rail inlet on the the barbecue. Do not overtighten. Do not use any sealing tape, paste or liquid on the connection.

Fixing a Regulator to the Gas Bottle

Confirm all barbecue control knobs are in the off position. Connect the regulator to the gas bottle according to your regulator and bottle dealer's instructions.

Operation

Warnings

- ▲ Before proceeding, make certain that you understand the **IMPORTANT INFORMATION** section of this manual.
- ▲ Your barbecue is not designed to be used with more than 50% of the cooking area as a solid plate — this includes baking dishes. Full coverage will cause excessive build-up of heat and damage the barbecue. This is not covered by warranty.

Preparation Before Cooking

To prevent foods from sticking to the cooking

surface, please use a long handled brush to **apply a light coat of cooking or vegetable oil before each barbecuing session.** (Note: When cooking for the first time, paint colours may change slightly as a result. This is normal and should be expected.)

Lighting the Barbecue

- Open the barbecue hood or lid before lighting. Never light your barbecue with the hood or lid closed.
- Ensure all knobs are in the off position. Open the gas control valve on the gas bottle or regulator.
- Push and turn the leftmost control knob to the high position. Press the ignition button rapidly several times until left portion of the burner is lit.
- If burner fails to ignite after following above procedure, turn all the knobs to the off position. Close the gas valve on the gas bottle. Wait 5 minutes. Reattempt all of the above steps. If the barbecue still fails to light, please refer to the manual ignition instructions below.
- After successful lighting of the left side, turn the rightmost control knob to the high position. The remaining portion of the burner should ignite automatically.
- After ignition, turn the burners to the low position for 3-5 minutes in order to pre-heat the barbecue. This should be done before each cooking session. The hood or lid must be open during preheating.
- Keep the burner controls on the low position for best cooking results.

Manual Ignition Instructions

- Open the barbecue hood or lid before lighting. Never light your barbecue with the hood or lid closed.
- Ensure all knobs are in the off position. Open the gas control valve on the gas bottle or regulator.
- Insert lit match through the right match-lighting hole on the underside of the barbecue body and place near rightmost burner porthole.
- Push and turn the rightmost control knob anti-clockwise to the high position, taking care to protect yourself from the flames.
- After the right portion of the burner is lit, light the remaining portion of the burner.
- If burner fails to ignite, contact your local dealer for assistance.
- After ignition, turn the burners to the low position for 3-5 minutes in order to pre-heat the barbecue. This should be done before each cooking session. The hood or lid must

- be open during preheating.
- Keep the burner controls on the low position for best cooking results.

Lighting the Side Burner (if applicable)

Push and turn the side burner control knob anti-clockwise to the high position. Push the ignition button rapidly until the side burner ignites. If the side burner fails to ignite, turn the control knob to the OFF position and wait five minutes before attempting to re-light following the above procedure. If the side burner still fails to ignite, turn the control knob off, wait five minutes and light with match.

When using the side-burner, care should be taken to ensure that pans are central and flat on the side-burner grid.

Grill Cooking

The burners heat up the flame tamer underneath the grill, which in turn heats the food on the grill. The natural food juices produced during cooking fall onto the flame tamer below and vaporise. The subsequent rising smoke bastes the food, as it travels upwards, imparting that unique barbecued flavour.

Do not roast food with the hood closed. Closing the hood for prolonged periods of time can lead to overheating of the barbecue or fat fires, which will damage the barbecue.

Warming Rack

Warming racks are a convenient way to keep cooked food warm or to warm items such as bread rolls. It is advisable to place food (particularly fatty foods) to the front of the warming rack to avoid the possibility of juices and fat running down the back of your barbecue. Always check that your warming rack is properly fitted before use.

Flare-Up Control *Very Important Notice*

Flare-ups occur when meat is barbecued, and its fat and juices fall upon the hot flame tamer. Smoke of course helps give food its barbecued flavour, but it is best to avoid excessive flare-up to prevent food being burned. **To control flare-ups, it is ABSOLUTELY ESSENTIAL to trim away excess fat from meat and poultry before grilling, use cooking sauces and marinades sparingly and try to avoid very cheap cuts of meat or meat products as these tend to have a high fat and water content. Also, the burners should always be placed on the low setting during cooking.**

When flare-ups do occur, they can usually be

extinguished by applying baking soda or salt directly onto the flame tamer. Always protect your hands when handling anything near the cooking surface of the barbecue and take care to protect yourself from the flames.

If a fat fire occurs, please see the instructions given below.

Fat Fires

Empty and clean the grease cup of food debris after each cooking session. If the barbecue is to be used for large gatherings, it will be necessary to turn off and cool the barbecue every two hours to remove food debris from the grease cup, and clean it out. The time between cleaning may need to be reduced if very fatty foods or cheap meat products are being cooked. Failure to do this may result in a fat fire, which may cause injury and could seriously damage the barbecue.

In the event of a fat fire:

- If safe to do so, turn all control knobs to the 'off' position.
- Turn off the gas supply at the gas bottle.
- Keep everyone at a safe distance from the barbecue and wait until the fire has burnt out.
- Do not close the hood or lid of the barbecue.
- NEVER DOUSE A BARBECUE WITH WATER. IF AN EXTINGUISHER IS USED, IT SHOULD BE A POWDER TYPE.
- DO NOT REMOVE THE GREASE CUP.
- If the fire does not seem to be abating or appears to be worsening, contact your local Fire Brigade for assistance.

End of Cooking Session

After each cooking session, keep the barbecue burners on the "low" position and burn for 5 minutes. This procedure will burn off cooking residue, thus making cleaning easier. Make sure the hood or lid is open during this process.

Turning Off Your Barbecue

When you have finished using your barbecue, turn all the control valves fully clockwise to the "Off" position, then switch off the gas supply at the bottle.

Wait until the barbecue is sufficiently cool before closing its hood or lid.

Care and Maintenance

Regularly clean your barbecue between uses and especially after extended periods of storage. Ensure the barbecue and its

components are sufficiently cool before cleaning. Do not leave the barbecue exposed to outside weather conditions or stored in damp, moist areas.

- ▲ Never handle hot parts with unprotected hands.
- ▲ Never douse the barbecue with water when its surfaces are hot.

In order to extend the life and maintain the condition of your barbecue, we strongly recommend that the unit be covered when left outside for any length of time, especially during the winter months. Heavy-duty barbecue covers and other accessories are available from your local stockist.

Even when your barbecue is covered for its protection, it must be inspected on a regular basis as damp or condensation can form which may result in damage to the barbecue. It may be necessary to dry the barbecue and the inside of the cover. It is possible for mould to grow on any fat remaining on parts of the barbecue. This should be cleaned off smooth surfaces with hot soapy water.

Any rust that is found that does not come into contact with the food should be treated with a rust inhibitor and painted with barbecue paint or a heat resistant paint.

Cooking Surfaces & Warming Rack

When the barbecue has cooled, clean with hot soapy water. To remove any food residue, use a mild cream cleaner on a non-abrasive pad. Do not use scouring pads or powders as they can permanently damage the finish. Rinse well and dry thoroughly. Due to the weight of the cooking surfaces, we do not recommend cleaning in a dishwasher.

Burner

Your burner has been preset for optimal flame performance. You will normally see a blue flame, possibly with a small yellow tip when the burner is alight. If the flame pattern is significantly yellow, this could be a problem caused by grease from cooking blocking the burner, or debris or insects in the burner portholes or venturi tubes. This can result in the flow of the gas and air mixture being restricted or blocked which may result in a fire behind the control panel causing serious damage to your barbecue. **If this happens, and if safe to do so, the gas should be immediately turned off at the bottle.**

Burner should be inspected, removed and

cleaned on a regular basis, at least annually, in addition to the following conditions:

- 1) Bringing the barbecue out of storage.
- 2) One or more of the burners do not ignite.
- 3) The burner flame pattern is significantly yellow.
- 4) The gas ignites behind the control panel.
- 5) When heavy build up is found.

Provided that they are operating correctly, in normal usage, burning off the residue after cooking will keep the burners clean.

To clean a burner fully, remove it from the barbecue. A soft wire brush can be used to remove corrosion from the burner surfaces. Use a pipe cleaner or piece of wire to clear obstructions in the burner portholes and venturi tubes, taking care not to enlarge the portholes.

Clean the insect screen on the end of the venturi tube with a bristle brush (i.e. an old toothbrush).

You may need a torch to see into the venturi tube to make sure it is clear. Turn the burner up on end and lightly tap against a hard surface like a piece of wood, to dislodge any debris from inside.

When refitting the burner, be careful to check that the venturi tubes of the burner fit over the valve outlets.

Flame Tamer

Remove any food residue from the flame tamer surface with a plastic or wooden scraper or brass wire brush. Do not use a steel scraper or wire brush. Clean with hot soapy water and rinse well.

Grease Cup

After every use, empty and clean the grease cup of any fat or food particles, using a plastic or wooden scraper if necessary.

Failure to keep it clean, and excessive build up can result in a fat fire. This can be hazardous and severely damage the barbecue. **This is not a fault in the barbecue and is therefore not covered by the terms of the warranty.** If required, the cup can be washed in hot soapy water.

Barbecue Body

Regularly remove excess grease or fat from the barbecue body using a cloth wrung out in hot soapy water and dry thoroughly. Excess fat and food debris can be removed from inside the body using a soft plastic or wooden scraper. It

is not necessary to remove all the grease from the body. If you need to clean fully, use hot soapy water and a cloth, or nylon-bristled brush only. Do not use abrasives. Remove cooking surfaces and burners before full cleaning. Do not immerse the gas controls or manifold in water. Check burner operation after carefully refitting into body.

Barbecue Hood or Lid & Trolley

Use a non-abrasive cloth or pad and clean with hot, soapy water. Do not use scouring pads or powders as they can permanently damage the finish.

Fixings

All screws and bolts, etc. should be checked and tightened on a regular basis.

Storage

Ensure the barbecue is properly cooled before covering or storing. Store your barbecue in a cool dry place.

Cover the burners with aluminium foil in order to prevent insects or other debris from collecting in burner holes.

If the barbecue is to be stored indoors, the gas bottle must be disconnected and left outside. The gas bottle should always be stored outside, in a dry, well-ventilated area, away from any sources of heat or ignition. Do not let children tamper with the bottle.

When using the barbecue after extended periods of storage follow the cleaning procedures.

Technical Specifications

| | Heat Input | Burners | Injector Size | Gas Consumption |

Troubleshooting

| Problem | Possible Cause | Solution |
|--|--|---|
| Burner will not light using the ignition system | LP gas bottle is empty | Replace with full bottle |
| | Faulty regulator | Have regulator checked or replaced |
| | Obstructions in burner | Clean burner |
| | Obstructions in gas jets or gas hose | Clean jets and gas hose |
| | Electrode or ignition button wire is loose or disconnected on electrode or ignition unit | Reconnect wire |
| | Electrode or wire is damaged | Change electrode and wire |
| | Faulty ignition button | Change ignitor and / or button |
| Burner will not light with a match | LP gas bottle is empty | Replace with full bottle |
| | Faulty regulator | Have regulator checked or replaced |
| | Obstructions in burner | Clean burner |
| | Obstructions in gas jets or gas hose | Clean jets and gas hose |
| Low flame or flashback (fire in burner tube— a hissing or roaring noise may be heard) | LP gas bottle too small | Use larger bottle |
| | Obstructions in burner | Clean burner |
| | Obstructions in gas jets or gas hose | Clean jets and gas hose |
| | Windy conditions | Use barbecue in a more sheltered position |
| Gas valve knob difficult to turn | Gas valve jammed | Replace gas valve |

Made in China

Manufactured by TPA Industrial (DG) Co. Ltd.

Town, Dongguan, Guangdong, China. 523768

OUTBACK® WARRANTY

OUTBACK® barbecues are warranted for a period of one (1) year from the date of purchase to the original purchaser against defects in materials and workmanship, OUTBACK® will supply replacements for defective parts free of charge provided that:

- ◆ The product has not been used for trade, professional or hire purposes.
- ◆ The product has not been subjected to misuse or neglect, including fat fires and flare ups or use of a faulty or incorrect regulator.
- ◆ The product has not sustained damage through foreign objects, substances or accidents.
- ◆ The care and maintenance instructions given in your Outback manual have been followed.

If the product includes one or a number of parts or accessories, only the defective accessory or part will be replaced i.e. Hose, Regulator, Rotisserie, Piezo Ignitor, Roast Hood and Side Burner.

Fat fires are not covered under warranty.

Any warranty & guarantee claims shall be rendered void in the event of improper use of the BBQ or the use of non approved fuels, discolouration , rusting or slight deformation of parts exposed directly to the flames (grill / griddle / flame tamers / burners ,etc) do not impair the function of the BBQ and do not form a basis for any claims.

This warranty is offered as an extra benefit and is in addition to the customers' statutory rights.

OUTBACK® does not in any way warranty the gas cylinder.

In the unlikely event that you experience problems with this barbecue, please fill in our warranty form at:

<http://www.outbackbarbecues.com/warranty-form>

One of our colleagues will be in contact with you shortly.

For reference and correspondence, record your serial number here.
(See sticker on side of barbecue body.)

Serial No. _____

This number may be required when ordering spare parts or accessories. A part reference number may also be required where applicable.

V1-25
